End of Day Status Report, Brooks McCall, May 20.

The rationale for today's sampling sequence was based on the hypothesis that the resumption in dispersant injection (ca. midnight May 18/19) would result in a new plume of dispersed oil at depth. We concluded that, based on fluorometry depth profiles, yesterday's samples probably tracked the remnants of the previous plume which moved in a southwesterly direction away from the spill site. Data gathered during the previous cruise indicated a vertical 'thinning' of that plume from between 1000-1400m to a narrower band between 1000-1100m. Yesterday's fluorescence measurements appeared to indicate that this trend was continuing. We detected a small fluorescence signal on the SW transect at respectively 8Km and 12Km from the spill site and an increase in fluorescence on a 15o arc NE of the 12Km station. No fluorescence was present at the station occupied SE of the transect.

In an attempt to pick up a new plume, today's sampling stations were closer to the spill site than yesterday. Modeling predictions and our own calculations indicated the probability of picking up a new plume on the SW transect at 4Km from the spill site. This was the first sampling station (B34) occupied at 0700. Contrary to expectations, only a small fluorescence signal was detected below 1100m. Subsequent samples were taken from the 1.7Km site (B35) and indicated a very small fluorescence trace. A third sample (B36) was taken due SW of the spill site at a distance of 1.5Km from the source showed a fluorescence signal between 1100 and 1300m in depth, although this was much smaller than the signal detected at this site on 5/15 (B20) and 5/16 (B21). To further characterize this signal we opted to move to a point 1.5Km due south of the spill site. Data at this fourth station (B37) showed no apparent fluorescence signal at any depth. Station specific information on samples is shown in attachment 1. As before, this spreadsheet only contains information from the current cruise, although attachments 2 and 3 include sites visited on previous cruises, but with sampling station from this cruise (3) highlighted. CTD data from this cruise are summarized in attachment 4. As samples from B37 were being retrieved and processed, at appx. 1615h we received a request to cease operations and prepare to return to Port Fourchon in order to resupply and proceed with the installation of 'real time' STD deployment/data retrieval capability. Following some stowage of samples and equipment we received a directive that reversed the original request at appx. 1730h. The new directive indicated that the vessel remained on station.

En route between the 4Km and 1.7Km marks along the SW transect and (between B34 and B35) we towed the Turner C3 Towfish Fluorometer at 2 knots. A second tow was made between stations B36 and B37, and a further tow of this instrument was initiated following the decision to remain on site instead of returning to port (at completion of samples from B37 1.5Km due south of the spill site. This tow (2 knots) followed a circular path around the spill site at a radius of 1.5Km. The instrument appeared to be performing satisfactorily, although some episodes of apparent fouling by oil were apparent. Data from these tows are summarized in attachment 5.

In view of contradictory data from oxygen analysis employing the LaMotte 5860 Field Kit we initiated a field cross-calibration exercise employing new La Motte kits. Along with routine analyses from the CTD and the Extech DO700 hand-held probe, three scientific crew members each made independent colorimetric analyses of three pairs of samples from different sampling stations. Results from this exercise are presented in attachment 6. A summary of particulate analyses (LISST) is shown in attachment 7. Although the low incidence of fluorescence in today's samples provided only limited opportunity for comparison between LISST data and fluorometry, as in the previous cruise there was generally good correlation between LISST data and fluorometry, particularly with reference to site B36, last visited as B26 on 5/17.

Culture of organisms (rotifers) for bioassays continued and counts made from a trial run initiated yesterday (see End of Day Status Report 5/19). Survival of lab controls was insufficient for the data to be acceptable, although, as survivors from the last cruise, the organisms were now five days old and well beyond the recommended specimen age for this assay. Hatching began from cysts cultured yesterday and sufficient were available for a limited assay using samples from B36 the only station showing significant fluorescence. In light of much more favorable weather conditions than for the last cruise we are attempting a full six replicated dilution series for samples B36D (300m, no noticeable fluorescence) and B36J (1300m, fluorescence peak). No results are available yet.

A brief inventory of equipment and supplies is shown as attachment 8. I can offer the following tentative conclusions from today's data, although other interpretation may be possible. Taken with yesterday's data from 12Km and 8Km along the SW transect, movement towards the spill site along this transect resulted in a diminished fluorescence signal that could represent the remnants of the deep water plume initiated by the previous dispersant injection episode. Attempts to pick up a new plume resulting from more recent injection indicated a much weaker fluorescence signal at depth than might have been expected. Only one site (B36) 1.5 Km SW of the spill source showed a substantial fluorescence signature below 1100m, although this was much weaker than when the station was last visited on 5/17. This could indicate a change in direction or speed of the deep water plume or a decrease in oil flow due to more effective oil retrieval at the spill site.

Summary of Attachments

- An Excel spreadsheet with six tabs, containing station specific information on samples.
- 2. A shape file of our station locations which can be imported to mapping software.
- 3. A pdf graphic based on the shape file showing our stations.
- A summary of data from Turner C3 towed fluorometer deployment.
- Results of cross-calibration exercise for Motte colorimetric dissolved oxygen analysis.
- 6. A summary of the LISST results.
- CTD plots for today's stations.
- 8. Equipment and inventory status.

Subject: Re: Need Desk Statement for EPA Sampling Crews in Venice Louisiana area

How about this? Dave and Carmen - weigh in. David

'We are part of EPA's on-going monitoring efforts to gather environmental samples for analysis. We are sampling air, water and sediment as part of an aggressive monitoring program by EPA that started after the BP Spill.

To date, our air data has not shown elevated levels that would cause concern for long-term health effects - and we are continuing to collect more samples.

Today - we are collecting (air, water, sediment?) samples for analysis as part of our independent oversight of the BP Spill.

EPA is making all data from these samples available on our Web site at www.epa.gov/bpspill." David Gray Director External and Government Affairs US EPA (214) 665-2200 office

Subject: Need Desk Statement for EPA Sampling Crews in Venice Louisiana area

Our EPA sampling teams will be sampling tomorrow in several areas in southern Louisiana. The area that I am particularly concerned about is the area south of Venice where CNN and several national media outlets have crews filming the oil coming up into the marsh. We need a desk statement that the folks can use. We will forward them to the JIC if possible, but would like to communicate the statement you prefer rather than just "please

If I can be of assistance or answer any questions, please contact me at (214)665-7548 or via email at hansen.mark@epa.gov.

Sincerely

Mark Hansen Associate Director for Prevention and Response(6SF-P) Superfund Division

U.S. EPA Region 6 1445 Ross Avenue (6SF-P) Dallas, Texas 75202 Telephone: (214) 665-7548 EPA Cell Phone: (214)789-2162

From: Craig Matthiessen/DC/USEPA/US Steve Mason/R6/USEPA/US@EPA Date: 05/21/2010 06:58 AM Subject: Re: ethoxylated nonylphenol

Hey, there mister regional response person. Good to hear from you.

Not that much of a scientist - I just play one on TV.

Yes, I believe these are the same or at least part of the same family. There can be different CAS numbers I think depending on the degree of polymerization. There are endocrine concerns but I believe I saw data that says the NPs and/or NPEs degrade within days, shorter in sunlight. Another trade-off issue....

05/21/2010 07:31 AM Subject: Re: ethoxylated nonylphenol

Hey there... long time no talk....

Quick question, Mr. Scientist...

Is Ethoxylated nonylphenol, which you described in your email, the same as nonyphenol ethoxylates, or nonylphenols.... ???

If so, in Wikipedia, at the bottom they describe those as:

- Nonylphenol and nonyphenol ethoxylates have been banned in the European Union as a hazard to human and environmental safety.
 For freshwater ecosystems, the Environmental Protection Agency has set two types of standards: the first which is considered acute criteria is one-hour average concentration of nonylphenol does not exceed 28 µg/L more than once every three years on the average.
- For saltwater ecosystems, the standard is considered to be chronic criteria and is set to four-day average concentration of nonylphenol that
 does not exceed 6.6 μg/l more than once every three years on the average.

Thanks

Faithfully yours

05/20/2010 08:52 PM Subject: Re: ethoxylated nonylphenol

> Hi; did a little digging on this substance. Didn't find anything relative to its bioaccumulation assertion; only that certain nonoxynols (of which this is one) have mild to medium estrogenic concerns - in fact one version is used as a spermatocide.

> $Ethoxylated\ nonylphenol\ (CAS\ \#9016-45-9)\ -a\ non-ionic\ surfactant\ (here's\ a\ wiki\ page\ on\ surfactants:\ http://en.wikipedia.org/wiki/Surfactant)$ Note at the bottom of this page, surfactants "are known to taste good to animals, ecosystems and humans, and can increase the diffusion of other environmental contaminants. Despite this, they are routinely deposited in numerous ways on land and into water systems, whether as part of an intended process or as industrial and household waste." According to Dow: "These surfactants are used anywhere there is a need for increased surface activity, and provide excellent all-purpose detergency and wetting, as well as solubilization and emulsification.

According to our CAMEO database: General Description: Colorless liquid or white solid with a mild odor. May float or sink in water. A low molecular-weight polymer. Used as a non-ionic surfactant, as an emulsifier, or as a metal cleaner, depending on the degree of polymerization.

Here is a link to an information sheet in the Coast Guard chemical hazard (CHRIS) manual: http://cameochemicals.noaa.gov/chris/ENP.pdf

Scroll down to the water pollution box which notes that aquatic toxicity ranges from low to high depending on the degree of polymerization. Also note that there's no food chain concentration potential - perhaps this is an indicator of a lack of bioaccumulation. One manufacturer of an ethoxylated nonylphenol (with a different CAS number) for a powdered vehicle wash says its biodegradable.

The only concern I ran across is on this wiki for nonoxynols: http://en.wikipedia.org/wiki/Nonoxynol
They have a mild to medium estrogenic function; some companies have removed these from their laundry detergents. The question would be in what form the ethoxylated nonylphenol takes when it breaks down the oil and whether the resulting substance has an estrogenic or bioaccumulation concern.

Craig Matthiessen

Subject: Subsea Dispersant: Daily Report for 5/20/10

Gentlemen,

Here is the report on dispersant use:

Start: 5/19 2200

Stop: 5/20 2200

Rate: 10 gpm

Volume: 14,210

Note: There was one disruption of injection from 2145 - 2158 on 5/20.

Please contact me if you have questions.

Thanks,

Rees Madsen 509-944-5552

Subject: Fwd: event report -- Brooks McCall 5/21

AII,

I am forwarding an "event report" from David Wright on the Brooks McCall. Great summary of today's effort.

Let me know if you do not want to receive these reports. I am not sure who received them in the past, so I am using the distribution list I use for the Brooks-McCall daily report.

Thanks,

Rees

Subject: event report

All,

Equipment in the water at 0715. We plan to stay close to source today to track new plume. Plume apparently much smaller than last week. Will circle spill site fairly close in today. All is well.

Subject: Fw: EU Review of Brooks McCall data from May 20 2010

Members of the EU, including representatives from NOAA, EPA, BP, and USCG met at 7:00 AM, reviewed the subject report, and offered the following observations / questions.

- 1) No data received to date are near the shutoff criteria established for Dissolved Oxygen or Toxicity
- 2) Data from May 20 appears to indicate that the dispersed plume is smaller
- 3) Since injection was continuous, currents were the same, and sampling methods were identical, it appears that the smaller plume footprint could be due to weaker source strength (lower release rate)
- 4) At least one sampling location, that is near the dispersant injection side will be re-sampled each day in order to allow simple trend analysis. This will typically be the sample that will be used forRototox analysis since it should have the highest hydrocarbon concentrations
- 5) BP will:

Check on ship to ship sample transfer and resupply options to allow the Brooks McCall to remain on station through the Top Kill procedure

Check on status of hydrocarbon analysis data

check into possibility of getting sonar data from ROVs to help guide sampling efforts

6) NOAA Will:

Check on problems with Rototox from yesterday

Verify which DO probes are being used on a daily basis

Maintain intersaction with modelling team to coordinate model results with sample collection strategies.

Maintain shore to ship communications between EU and Brooks McCall

Run a GNOME model based on the previous sampling results

05/20/2010 02:20 PM

Hello Everyone,

From my notes of this morning's EOC call, I wanted to make sure the following items were assigned to somebody for follow-up and completion.

(1) from Dana: Before we comment or send anything in writing to anybody about the barrier island/berm plan, we should send the document to Dana Tulis, with cc:s to Bob P and Janet Woodka, so that THEY can distribute.

(2) from Bob P: Someone in Robert should evaluate the media reports of thick crude, as well as NOAA's maps of marshes with oil impacts, and NOAA's maps of areas that have been boomed to determine: are the areas that are being impacted by thick crude areas that were/were not boomed?

(3) from Bob P: I need a map (if one exists) about how extensive the thick crude impacts on marshes are, in terms of approximate length of impact (either confirmed or virtually-confirmed)? Perhaps NOAA has maps or an estimate of impact?

Also, before COB today, can someone please please please send me the copy of the Word file of our sampling plan, even if it is not done and has not yet been edited to reflect comments received from other groups within EPA? I need to see where we are on this.

Thanks

ΑI

Subject: Re: Fw: EU Review of Brooks McCall data from May 20 2010

Thanks Jim. Good info. I am working with Steve Mason and Nancy Jones to develop an overall reporting checklist to provide Capt. Hanzalik. My thought is we can take some of the burden off by assisting in develop of this reporting list which the FOSC can then provide to BP. Will consult with you on the form prior to distribution to USCG.

Craig Carroll Chief, Emergency Readiness Section EPA Region 6 Ph: 214-665-2220 Fax: 214-665-9718

James Staves---05/21/2010 09:34:19 AM---Members of the EU, including representatives from NOAA, EPA, BP, and USCG met at 7:00 AM, reviewed

Cc: Steve Mason/R6/USEPA/US@EPA

Date: 05/21/2010 09:34 AM

Subject: Fw: EU Review of Brooks McCall data from May 20 2010

- 1) No data received to date are near the shutoff criteria established for Dissolved Oxygen or Toxicity
- 2) Data from May 20 appears to indicate that the dispersed plume is smaller
- 3) Since injection was continuous, currents were the same, and sampling methods were identical, it appears that the smaller plume footprint could be due to weaker source strength (lower release rate)
- 4) At least one sampling location, that is near the dispersant injection side will be re-sampled each day in order to allow simple trend analysis. This will typically be the sample that will be used forRototox analysis since it should have the highest hydrocarbon concentrations

Check on ship to ship sample transfer and resupply options to allow the Brooks McCall to remain on station through the Top Kill procedure

Check on status of hydrocarbon analysis data

check into possibility of getting sonar data from ROVs to help guide sampling efforts

6) NOAA Will:

Check on problems with Rototox from yesterday

Verify which DO probes are being used on a daily basis

Maintain intersaction with modelling team to coordinate model results with sample collection strategies.

Maintain shore to ship communications between EU and Brooks McCall

Run a GNOME model based on the previous sampling results

All,

We have now started uploading all the STRs to a new FTP site since the file size on these is quite large with photos and maps included. Please see the attached instructions for access and let me know if you have questions.

Thanks.

Jonathan Whitlock GIS Analyst (704)910-7422 cell www.researchplanning.com

The daily SCAT maps are now available at the NOAA Response ftp site. Also stored on the ftp site are the STR's - instructions for cleanup.

I will attach information for how to connect to the site, together with username and password info.

The information provided on this site should be considered to be non-public information. Distribution / dissemination of this information to anyone other than response personnel with the need to know is prohibited unless and until permission to distribute / disseminate is granted from the Joint Information Center (JIC).

Althea,

In regards to your questions, I went to the Situation Unit to determine if those maps exist... They indicated they do not have those here in Robert.... Before I was able to talk to Charlie, I saw that Craig had already sent him an email... Craig have you received a response back from Charlie.... no sense both of chasing Charlie (he is busy enough)

Nancy, have you seen these maps down in Houma, either with NOAA or in the Situation Unit

Faithfully yours

Steve

AI to: Lawrence Starfield, Sam Coleman, Mark Hansen, Jon Rauscher, Susan Webster Armendariz 05/20/2010 02:20 PM

Hello Everyone,

From my notes of this morning's EOC call, I wanted to make sure the following items were assigned to somebody for follow-up and completion.

- (1) from Dana: Before we comment or send anything in writing to anybody about the barrier island/berm plan, we should send the document to Dana Tulis, with cc:s to Bob P and Janet Woodka, so that THEY can distribute.
- (2) from Bob P: Someone in Robert should evaluate the media reports of thick crude, as well as NOAA's maps of marshes with oil impacts, and NOAA's maps of areas that have been been been been determine: are the areas that are being impacted by thick crude areas that were/were not beomed?
- (3) from Bob P: I need a map (if one exists) about how extensive the thick crude impacts on marshes are, in terms of approximate length of impact (either confirmed or virtually-confirmed)? Perhaps NOAA has maps or an estimate of impact?

Also, before COB today, can someone please please please send me the copy of the Word file of our sampling plan, even if it is not done and has not yet been edited to reflect comments received from other groups within EPA? I need to see where we are on this.

Thanks.

ΑI

Subject: Re: Fw: QUOTE FOR MARITIME SYSTEM RENTAL

the following questions:

1. I understand this will be installed onto the charter vessel that EPA has hired (R/V Brooks McCall). Do we have authorization from the ship owner to mount this equipment to the vessel?

The equipment includes a 1M dish and weighs 330 lbs. Are there any size concerns?

Will the installation require modification to the vessel that could constitute damage? (i.e. drilling holes in the deck or hull to mount or run cables)

Will the installation require any other parts/equipment not listed on the quote? (i.e. a mast or telescope)

Will the installation require any special devices or tools not listed on the quote or otherwise not available? (i.e. forklift, hoist, or dock crane)

How will the contractor respond to any service requests?

Thanks in advance.

Subject: RE: Subsea Dispersant: Daily Report for 5/20/10

Steve

Thanks for getting the info out in my absence. But one point of clarification might be needed. Is that 2200- 2200 interval merely a reporting period?

There was no physical start nor stop at those time points(other than the identified disruption between 2145 and 2158), and the injection remained continous across both 2200 reporting points. With total volume given over that period...correct?

Again still underway after the second 2200 time that says STOP. This might confuse people if you state it like that in the POLREP without clarifying there was no actual start or stop at the 2200 marks in time...with them being merely reporting benchmarks with voume dispensed over that 24-hr period. Sorrry for any confusion over the consistency of reporting for the polrep...and again many thanks for covering this while I'm gone

Jon and all,
I have attached a revised SOW and a spreadsheet with our cost estimate. The spreadsheet itemizes the assumptions we used to develop the cost estimate. Per your recommendation, I have added some additional detail to the SOW, and I added two notes at the end of the SOW to further explain the relationship between the HQ EOC operations and our field operations as well as our representatives at the HQ NIC at USCQ Headquarters. Hopefully this will alleviate the concerns regarding potential overlap between different PRFAs and better explain our HQ EOC operations.
Our hope is that, after your review, you will be able to present this to the FOSC her approval. As I mentioned last night, we stand by ready to answer any questions or concerns. We also have EPA folks with you in Louisiana who might be able to assist you with any additional questions or explanations.

        Subject:
       |RE: FW: SOW for HO PRFA
 Hi Dana,
 I am very sympathetic to EPA's operational needs at every level. And if funding or activity is limited, please know that it would not be a statement against EPA's EOC or EPA's needs. The decisions strictly deal with whether an activity is fundable under OPA and whether it is a requested service from the IC/FOSC. I don't want to get too deep into those operational/policy decisions, I'll leave that to those far higher in the food chain to wrangle with.
 But I can give you some feedback on how this needs to be framed for the Unified Command.
 1. Both RADM Landry and RADM Watson are very detail oriented when reviewing PRFAs, MIPRs, contracts, etc. The more clarity, the easier it is to get approval.
 2. A spreadsheet with the cost estimate details is highly recommended. Without it, it will most likely get sent back.
```

3. The explanations in #1 and #2 of your e-mail should probably be

included as an addendum to your SOW. It cleared up a couple of issues that I had with the SOW.

I hope this helps. Let me know if you have additional questions or need assistance with any Deepwater Horizon issues.

Subject: Re: FW: SOW for HQ PRFA

Tim / Jon / all.

I understand Tim is out for the next couple of days, so I am also responding to Jon and Greg in the field, and copying several EPA folks who have been discussing this situation with me .

who have been discussing this situation with me.

The proposed PRFA SOW for HQ EOC operations that I provided yesterday presents a pretty good summary of the activities ongoing in our HQ EOC, I think. Because both Regions are involved in this response and the accompanying activities, and because of the very senior level of attention being paid to this incident, we have been incredibly active in the Headquarters EOC. We are providing direct support to a variety of EPA field activities, including developing sampling plans, analyzing and publishing sampling data, and scientific support for dispersant use. All of these field activities are under direction of the FOSC. Furthermore, due to the very senior level of attention and involvement, we are gathering and coordinating data from the field from both Regions to assist in regular (daily or more frequently) briefings with the Administrator, Deputy Administrator, and other senior leadership. This helps with Agency decisions as well as their interaction with other agencies and those senior leaders.

Regarding some of the specific questions:

- 1 None of the tasking in this proposed PRFA SOW is duplicative I - Nome of the tasking in this proposed PMFA SW is a uplicative or overlapping with any tasking covered under other PMFAs. This would overlapping with any tasking covered under other PMFAs. This would to directly support the field activities as well as support PMFA senior leadership and meeting PMFAs mission to support human health and the environment including sharing information transparently and quickly with the public and potentially impacted parties. These activities in the HQ EOC are in direct support to our field operations as directed by the FOSC.
- 2 This PRFA includes the people mobilized to the Headquarters NIC at USCG Headquarters in Washington DC. They are providing excellent coordination with the USCG and other agencies involved in this response. However, their efforts are focused on that interagency coordination. They are not involved in the very detailed daily operations in the HQ EOC related to the other tasks in the proposed SOW. Thus, again, it is not duplicative; their roles are different, but complementary.

not duplicative; their roles are different, but complementary.

3 - I can provide a spreadsheet with the details of the cost estimate. However, I thought this summary might help:
- staffing for surge/activation of EOC, including overtime as necessary, 40+ people, approximately \$1 million+
- travel for Agency employees deployed to HQ EOC to support these activities, approximately \$508+
- contractor costs for EOC support, data analysis and management, IT support, and GIS support, approximately \$700 As stated, these are all costs hat are being incurred strictly because of the HQ EOC activation of the strictly and GIS support, approximately \$700 As stated, these are all costs hat are being incurred strictly because of the HQ EOC activation cover our normal expenses of keeping our EOC operational during non-activated times. The number of people is based on our HQ EOC sign-in sheets since we have activated the HQ EOC for this spill response. It would be impossible to break these expenses out by the resident

response. The we have activated the Ap ECC to this spirit response. It would be impossible to break these expenses out by the various specific tasks in the proposed SOW (other than perhaps the folks deployed to USCG HQ for the NIC coordination work). Some people in the ECC might be focused on one aspect or another related to the response-related activities, such as water monitoring vs. air monitoring vs. data publication vs. dispersant science, but as priorities change, the staffing might change. Furthermore, much of the HQ ECC staff is covering all of these activities, such as by developing and preparing senior leadership briefings, etc.

4 - My understanding is that the Regions are in frequent contact with the FOSC and her representatives regarding a variety of potential assignments in support of the response. We are working diligently with both Regions to ensure that the tasking in our proposed SOW does not conflict with or overlap with any other PRFA activities.

Our hope is that you are able to determine whether the FOSC is supportive of these activities in support of her response, and whether she is willing to approve the FRFA. As you know, we have Region 6 staff co-located with your folks in Louisiana and they should be able to assist if necessary. And, of course, I stand by ready to answer any additional questions or provide additional information to help facilitate this FRFA approval.

Thanks for your help. -- Dana S

FW: SOW for HQ PRFA
Dana, preliminary review of your write-up received these observations: it needs to provide a little more detail, i.e., more numbers showing people assigned at the EOC and connect the EOC work performed to the operational work ongoing in the Gulf. It doesn't need to be longer, just a little more detail. Also please see Jon's input below.
One other issue: After reading Sam Coleman's e-mail he seems to be talking about a much larger effort than simply funding the EOC. Note this excerpt from his e-mail:
"We are currently collecting independent data in a number of areas: 1. Near shore water and sediment to detect oil and dispersant 2. On shore air quality related to oil spill and dispersant application 3. Off shore air quality related to workers and fishermen
The future sampling needs will include: 1. Water samples to form early warning system 2. Specific analysis for chemical dispersants in air and water 3. Off shore SMART Tier III Plus''
There is concern that much of what he says here is what is already being performed by NOAA and others. Finally, if EPA does want to go forward with a request for funding, I would recommend a separate PRFA which describes this on-scene efforts, rather than trying to include it in the HQ EOC PRFA as it would be difficult to describe and retain clarity. Thanks, Tim
Original Message From: Abramson, Jonathan Sent: Monday, May 17, 2010 3:47 PM To: Eastman, Timothy Cc: Buie, Gregory Subject: RE: SOW for HQ PRFA
Tim,
The activities outlining the direct support are beyond my knowledge of what is being done at the operational level in this aspect of the spill. Is it impinging on the activities that NOAA, F&WS, among others? I don't know. Is it a necessity of the IC? I don't know.
However, the glaring deficiencies are at the end.
 The cost estimate needs to be broken out/itemized. There are a number of activity costs requested. Lumping them together distorts the value of the separate services.
2. The NIC is the designated hub for support from Federal Agencies. While I do not discount EPA's want or need of their own Emergency Operations Center (BOC), the CG is the lead agency in this response not EPA. The use of a separate Command seems to conflict with the idea of the NIC. Moreover, such a center seems outside the purview of an oil removal activity under OPA. It also appears to be outside the realm of direct support to the FOSC.
If we go out far enough I'm sure the entire nation or world is in someway providing its support for this incident. How many degrees of separation allowed, in my opinion, should be limited to direct support to the oil removal actions. I do not see ECC falling within this realm.
V/r,

Jim.

We sent these to Steve last night, he indicated this morning tat you might be in a better position to answer this. Have you been able to locate any maps that address the RA's request below:

(2) from Bob P: Someone in Robert should evaluate the media reports of thick crude, as well as NOAA's maps of marshes with oil impacts, and NOAA's maps of areas that have been boomed to determine: are the areas that are being impacted by thick crude areas that were/were not boomed?

(3) from Bob P: I need a map (if one exists) about how extensive the thick crude impacts on marshes are, in terms of approximate length of impact (either confirmed or virtually-confirmed)? Perhaps NOAA has maps or an estimate of impact?

Hello Everyone,

From my notes of this morning's EOC call, I wanted to make sure the following items were assigned to somebody for follow-up and completion.

- (1) from Dana: Before we comment or send anything in writing to anybody about the barrier island/berm plan, we should send the document to Dana Tulis, with cc:s to Bob P and Janet Woodka, so that THEY can distribute.
- (2) from Bob P: Someone in Robert should evaluate the media reports of thick crude, as well as NOAA's maps of marshes with oil impacts, and NOAA's maps of areas that have been boomed to determine: are the areas that are being impacted by thick crude areas that were/were not boomed?
- (3) from Bob P: I need a map (if one exists) about how extensive the thick crude impacts on marshes are, in terms of approximate length of impact (either confirmed or virtually-confirmed)? Perhaps NOAA has maps or an estimate of impact?

Also, before COB today, can someone please please please send me the copy of the Word file of our sampling plan, even if it is not done and has not yet been edited to reflect comments received from other groups within EPA? I need to see where we are on this.

Thanks.

ΑI

Subject: MODU Deepwater Horizon incident

Dear RRT State Members,

The MODU Deepwater Horizon incident in the Gulf of Mexico has been classified as a Spill of National Significance (SONS). Most regions in the United States are being impacted by requests for resources. The CG National Strike Force Coordination Center (NSFCC) is maintaining the national oil spill equipment resource picture by tracking the availability of equipment remaining in each state through the Response Resources Inventory (RRI) database. To this point, the equipment listed in the RRI has primarily been limited to classified Oil Spill Removal Organization (OSRO) and Coast Guard equipment resources.

To more accurately portray the nation's response readiness status, we request the assistance of the individuals in your region who maintain inventories of the State government, city/county governments and private company owned oil spill response equipment in entering this information into the RRI. The procedures for creating an RRI account can be found by accessing the following website: https://cgpri.uscg.mil/LogOn.aspx and selecting the "click here to register" link and entering the required information. Upon establishing an RRI account we request that you enter your major pieces of oil spill response equipment, primarily containment boom, skimmers, and temporary storage. The tutorial for entering information into the RRI can be found at: http://www.uscg.mil/hq/nsfweb/nsfcc/ops/ResponseSupport/RRAB/becomeaclassifiedosro.asp; follow the link to "Response Resource Inventory System Instruction."

We also request that you update the RRI in the event that you move your equipment to the Gulf in support of the Deepwater Horizon response. The procedures for completing this process are attached.

If you are unable to complete the data entry in the RRI, we request that you provide a copy of your state/federal-owned equipment inventory to the NSFCC so that we might account for this equipment. This information can be provided by email to the following address:
NSFCC_Deepwater_Horizon@uscg.mil or by fax to 252-331-6012.

We thank you for your assistance in helping to ensure the accurate depiction of available resources in your area.

Our contact for the RRI is LT Jackson at 877 740 6776. If you have questions regarding this request, please feel free to contact Mr. Jim Snyder at 252 331 6000 X 3013.

Subject: Address for Crew and insurance questions

Dear Michele, Randy and Steve,

The address for the crew to rendezvous is:-

ADDRESS:

ICU 8912 Hwy 182 East Morgan City, LA 70380 Att: Ocean Veritas Perry Rosenthal (ship Captain) 206.849.5352

Email addresses for individuals on the boat:

Neal: nealf@stabbertmaritime.com Colin: colinp@stabbertmaritime.com

TIMING:

ARRIVAL SUNDAY 23rd May- no specific time.

Thanks,

Peter

Subject: Deepwater Horizon Incident Situation Update #24

Deepwater Horizon Incident, Gulf of Mexico Region 6 REOC Update

Subject: Region 6 Update # 24

Deepwater Horizon Incident, Gulf of Mexico May 21, 2010

Date: Incident Command To: Thru: Planning Section

From: Situation Unit Operational Period: May 21, 2010 0700 – May 25, 2010 0700 **Reporting Period:** May 20, 2010 1300 – May 21, 2010 1300

1. Background

Site Name: Deepwater Horizon Incident FPN#: N10036 Mobilization Date: 4/27/2010 Start Date: 4/28/2010

2. Current Situation

- The incident status summary as reported in the BP Situation Executive Summary as of 0600 on 5/21:
 - 23,997 personnel and 1,085 offshore vessels are currently responding to the incident.
 - Over 1.46 million feet of containment boom and 560,000 feet of sorbent boom have been deployed.
 - Over 212,000 barrels of an oil-water mix have been recovered.
 - Over 604,000 gallons of surface dispersant have been applied. Over 73,000 gallons of subsea dispersant have been applied.
 - A total of 36 controlled burns have been conducted.
 - A SMART monitoring team was established at the Louisiana Offshore Oil Port to begin operations on 5/21.
- Subsea dispersant injection resumed at 1630 hours on 5/19 and is currently ongoing. Crews plan to continue subsea dispersant injection on 5/21.

2.1 (USCG) Incident Command Post (Houma, LA)

- No surface dispersant was applied on 5/20 due to the presence of weathered oil; however, sub-surface dispersant injection was conducted.
- Controlled burns were conducted on 5/20.
- SCAT teams reported that Fourchon Beach was heavily oiled and that oil may have flowed over the beach into the back waters. Ground teams reported that the oil is present on the western portion of Grand Isle, LA. An Aerial SCAT of Brush Island indicated the presence of oil on the island.
- BP reported that 21 boats and 4 helicopters were deployed for wildlife reconnaissance and rescue operations on 5/20.
- The EPA Emergency Response DATA Team collaborated with NOAA to facilitate the first meeting of BP's Information Management Team. EPA plans to provide support to the USCG and NOAA to document the existing data flows.

2.2 (USCG) Area Command Post (Robert, LA)

- · Members of the EU, including representatives from NOAA, EPA, BP, and USCG met on 5/21, reviewed the Brooks McCall data report, and offered the following observations/questions:
- No data received to date is near the shutoff criteria established for Dissolved Oxygen or Toxicity.
- Data from 5/20 appears to indicate that the dispersed plume is smaller than observed last week.
- Since injection was continuous, currents were the same, and sampling methods were identical, it appears that the smaller plume footprint could be due to weaker source strength (lower release rate)
- o At least one sampling location near the dispersant injection site will be re-sampled each day in order to allow simple trend analysis. This will typically be the sample that will be used for Rototox analysis since it should have the highest hydrocarbon concentrations.
- EPA continued to coordinate logistics for a second sampling operation during dispersant application.
- EPA worked to identify a potential alternate source for dispersants.
 EPA met with NOAA to coordinate deep sea sampling activities.

2.3 Air Monitoring/Sampling

- EPA continues to conduct air monitoring and sampling in Venice operations area (VOCs and Particulates):
 Venice, LA 29.25274 N, 89.35750 W V02;
- Boothville, LA 29.31449 N, 89.38433 W V03; Fort Jackson, LA 29.35699 N, 89.45487 W V05.
- EPA continues to conduct air monitoring and sampling in Chalmette operations area (VOCs and Particulates):
 O Poydras, LA 29.86609, -89.89108 CO2 located at Fire Station number 8;

 - Chalmette, LA 29.96082, -90.00132 C04 located at FireStation on Aycock St. Hopedale, LA, 29.84049, -89.68980 C05 located at Fire Station number 11.
- · Each air monitoring location has 4 pieces of air equipment:
- - EBAM (Particulate Monitors)-equipment has replaced DataRAM's; AreaRae/MultiRae monitoring VOCs;
 - PQ200 samples for PM2.5;
- SUMMA Canisters per location sample for VOCs.
 Air monitoring/sampling stations are monitored throughout the day (24 hours) for immediate reporting of any elevated VOC or particulate levels. The maximum reading is reported to the OSC at Mobile Command Post in Venice and Chalmette.
- · Real-time air monitoring data from midnight to midnight each day is reviewed for field QA and uploaded into SCRIBE by 1200 each day and available to EPA Headquarters, REOC, and external response partners.
- There are no exceedances to report.

EPA summary of air monitoring/sampling activities:

Air Monitoring & Samples	DataRAM (PM10)	AreaRae	SUMMA Canisters	PM2.5	TOTALS FOR 5/17	
Venice	3 locs/24-hr	3 locs/24-hr	3	3	6	
Chalmette	3 locs/24-hr	3 locs/24-hr	3	3	6	
TOTAL TO DATE	6 locs/24-hr	6 locs/24-hr	239	120		

OAOC samples not included in sample

2.4 Water/Sediment Sampling

· EPA continues to conduct water sampling at locations provided by EPA Headquarters and selected through National Coastline Condition Assessment (NCCA) program.

- The NCCA sample locations are sampled every four years by state agencies with U.S. Coastlines. Sample parameters and locations were also selected in coordination
- with the EPA Region 6 Water Quality Division.

 Representatives from the Water Division and the REOC Environmental Units from R6 and R4 conduct a conference call three times a week with the HQ EOC to
- discuss the coordination and consistency of water and sediment sampling across the Deepwater Horizon Incident Response.

 On 5/20, Chalmette water operations conducted sampling in the Terrebonne and Timbalier Bays area near Ft. Fouchon and Grand Isle, LA to assess impacts from oil and dispersants.
 - On 5/21 Chalmette water operations plan to collect water samples from the four points of concern in the Terrebonne and Timbalier Bays area. Samples will be
 - collected from these locations once every 3-5 days.

 Venice water operations were not conducted on 5/20 and are scheduled to resume on 5/21. The target locations are along the Venice delta.

EPA summary of water/sediment activities:

Water/Sediment Samples	Water	Sediment	TOTALS FOR 5/18	
Venice	0	0	0	
Chalmette	6	1	7	
TOTAL TO DATE	85	71		

2.5 TAGA

- On 5/20, TAGA performed mobile monitoring for oil dispersant indicator compounds, OD-00 and OD-27, from Slidell, LA to Venice, LA. All observed OD-00 and OD-27 indicator compounds were associated with a point source.

 • TAGA plans to perform mobile monitoring for oil dispersant indicator compounds, OD-00 and OD-27, on 5/21 in Southern MS and AL.

2.6 ASPECT.

- On 5/20, ASPECT completed two missions. During the first mission, no oil burns were observed. A high altitude photo survey was conducted over the recovery area. Skimming operations were noted approximately 5 miles north of the rig site. During the second mission, ASPECT observed two oil fires.
 ASPECT personnel made general assessment by comparing aerial images from 5/17 to those collected 5/20. It appears that oil coverage over the rig area is beginning to
- break up into masses.

 ASPECT is not scheduled to fly on 5/21 while maintenance is conducted on the aircraft.

2.7 Water Quality Protection Division Update

The Water Quality Protection Division situation update is attached.

3. EPA Assets

3.1 Current Assets Deployed

Re: NRT meeting summaries for Deepwater Horizon/BP oil spill meetings

NRT meeting summaries are reviewed by the USCG and EPA before being released to the NRT Member Agencies. Please contact your member agency representative to obtain a copy of the meeting summary. NRT meeting summaries are released within 24 hours and will bear the blue NRT banner at the top of the page.

Any other meeting minutes for an NRT call shall be held internally and shall not be distributed. Additionally, these other meeting minutes should bear the name of authoring agency/department in the header so as to prevent confusion.

Please share this message within your agency, as appropriate.

Thank you.

Subject: Re: Dispersant Meetings for Today

Sam, we have fixed the data issue today I think. I have already pulled trigger on the data support of USCG/NOAA in Houma to address reporting requirements under the directives as well as pull together other data sources that we believe will be important in the coming weeks.

Subject: Re: Proposed language we would like to give Adm. Landry

I think this is closer to waht we discussed:

The Unified Command will continue to use an integrated management approach to control the oil. This approach will prioritize offshore response efforts as follows, starting with highest priority: subsurface application first; mechanical recovery, skimming, and burning on the surface second; surface dispersant third (and only as specified below). When appropriate to address oil not otherwise remediated with priority aproaches, surface application of dispersant will be used. All parties agree, since the inception of the response, the use of dispersants should be minimized whenever feasible.

Monitoring of the application of dispersants, both subsurface and surface, will continue to determine efficacy and to any short-term impacts.

Subject: NRT Meeting Alert: announcement and agenda May 22, 2010 @ 1100 EDT

*****DO NOT REPLY TO THIS EMAIL - THIS IS A POST MAILING ONLY****** Contact Mike Faulkner (faulkner.mike@epa.gov; 202-564-1978) with substantive questions and Michael Lengle (michael lengle@sra.com; 703-284-6086) with logistical questions.

> To: NRT Members and Alternates Sent on behalf of USCG

From: CAPT A.S. Lloyd, NRT Vice Chair, NRT Chair for the BP Oil Spill Response - Gulf of Mexico Incident

Secretary Napolitano and the National Incident Commander (NIC) have requested a conference call with the NRT Member Agency Heads (Secretary Level) plus one member. This call is scheduled for 11:00 AM EDT on May 22, 2010 and should last no longer than 30 minutes. Regional Response Team IV and VI Co-Chairs may call in

Please call in at 10:45 AM and note that roll call will begin at 10:50 AM. The call in telephone number is 1-800-320-4330; PIN: 193740#. The agenda is attached for your

Action Items:

· As soon as possible, please provide the name of Principal-level representative(s) who will be participating on the call to Joseph.T.Lally@uscg.mil. · NRT Members: Please ensure your Agency Principals are aware of the senior level interest in these BP Oil Spill Response - Gulf of Mexico incident NRT

Due to the technical nature of this conference bridge and potential to create interference during the call. NRT members are asked to call in via land line. Cell phones are extremely disruptive and may cause the call to drop. In addition, the nature of this telephone bridge is such that a tone will sound when participants enter or leave the conference. As such, it is requested you not call into the bridge after 11:00 AM EDT, nor drop out of the conference prior to its conclusion. In addition, unless actively participating, it is requested you keep your telephone on mute. Please do not place your telephone on hold during the conference.

I think this is closer to Waht We discussed:
```

The Unified Command will continue to use an integrated management approach to control the oil. This approach will prioritize offshore response efforts as follows, starting with highest priority: subsurface application first; mechanical recovery, skimming, and burning on the surface second; surface dispersant third (and only as specified below). When appropriate to address oil not otherwise remediated with priority aproaches, surface application of dispersant will be used. All parties agree, since the inception of the response, the use of dispersants should be minimized whenever feasible. Monitoring of the application of dispersants, both subsurface and surface, will continue to determine efficacy and to any short-term impacts. ▼ <u>Steve Mason</u>

Subject: NRT Meeting Alert: UPDATED agenda for May 22, 2010 @ 1100 EDT meeting

*****DO NOT REPLY TO THIS EMAIL - THIS IS A POST MAILING ONLY****** Contact Mike Faulkner (faulkner.mike@epa.gov; 202-564-1978) with substantive questions and Michael Lengle (michael lengle@sra.com; 703-284-6086) with logistical questions.

> To: NRT Members and Alternates Sent on behalf of USCG

Note: Please see the updated agenda (see attachment).

---Original Message---

From: CAPT A.S. Lloyd, NRT Vice Chair, NRT Chair for the BP Oil Spill Response - Gulf of Mexico Incident

Secretary Napolitano and the National Incident Commander (NIC) have requested a conference call with the NRT Member Agency Heads (Secretary Level) plus one member. This call is scheduled for 11:00 AM EDT on May 22, 2010 and should last no longer than 30 minutes. Regional Response Team IV and VI Co-Chairs may call in.

Please call in at 10:45 AM and note that roll call will begin at 10:50 AM. The call in telephone number is 1-800-320-4330; PIN: 193740#. The agenda is attached for your convenience.

Action Items:

- · As soon as possible, please provide the name of Principal-level representative(s) who will be participating on the call to Joseph.T.Lally@uscg.mil.
- NRT Members: Please ensure your Agency Principals are aware of the senior level interest in these BP Oil Spill Response Gulf of Mexico incident NRT

Due to the technical nature of this conference bridge and potential to create interference during the call, NRT members are asked to call in via land line. Cell phones are extremely disruptive and may cause the call to drop. In addition, the nature of this telephone bridge is such that a tone will sound when participants enter or leave the conference. As such, it is requested you not call into the bridge after 11:00 AM EDT, nor drop out of the conference prior to its conclusion. In addition, unless actively participating, it is requested you keep your telephone on mute. Please do not place your telephone on hold during the conference.

We made a couple of technical errors to assure that we can keep this moving

Proposed language from ?

BP shall use an integrated management approach to control the oil. BP will ensure prioritization of offshore response efforts that focuses on mechanical recovery, skimming, and burning on the surface, as well as subsurface application. If mechanical recovery and other surface efforts are not feasible, BP will employ surface application of dispersant. BP must minimize, to the maximum extent feasible, application of surface and subsurface dispersants.

BP shall immediately comply with the monitoring provisions of the May 9, 2010 Directive, Section II "Special Monitoring of Applied Response Technologies ("SMART") Protocol for Surface Application of Dispersants," to determine efficacy and short term impacts of dispersant application.

Separately, EPA and USCG will pursue the use of less toxic dispersants with BP.

BP shall use an integrated management approach to control oil. BP shall first try mechanical recovery, including skimming, and burning on the surface. If that is not feasible, BP shall perform subsurface application of dispersant. Only if mechanical recovery and subsurface application are not possible may BP perform surface application of dispersant. BP must minimize, to the maximum extent feasible, application of surface and subsurface dispersants.

BP shall immediately comply with the monitoring provisions of the May 9, 2010 Directive, Section II "Special Monitoring of Applied Response Technologies ("SMART") Protocol for Surface Application of Dispersants," to determine efficacy and short term impacts of dispersant application.

Separately, EPA and USCG will pursue the use of less toxic dispersants with BP.

We met the other day at Robert, LA. You mentioned that you would send me a link to a web site where EPA could review your information. This is just a reminder.
Thanks,

Subject: 5/21/10 Robert, LA REOC Activity Summary

- Coordinated several conference calls and meetings in regards to dispersant application.
 Continued to coordinate with BP and NOAA on the acquisition and deployment of a second vessel for monitoring and sampling of subsurface dispersant. The Veritas vessel will be available on 5/25/10 or 5/26/10.
 Continue coordinating NOAA and USCG on data management integration efforts.
 Coordinated with Lisa Boken and Eric Paisley to obtain a uridinary phone for use on the Brooks-McCall boat 5/22/10.
- Coordinated with REOC for appropriate personnel to participate on both sampling vessels in the future.

Sub-Sea Dispersant daily POLREP Update (FRI 21 MAY, 2010 UPDATE) MISSISSIPPI CANYON 252 INCIDENT

FYI & SA - Updates are highlighted in YELLOW since yesterdays update.

Note: The continued purpose of this POLREP is now to Update on a daily basis the following:

1) Major Start & Stop chronologic events for the Sub-Sea Dispersant Injection since it entered the conditional operational phase, and cumulative gallons dispersant injected at end of each major stop point

2) Capture any O/S and Departure stats of monitoring vessels in support of the required monitoring protocols.

Subject: RE: EPA Obtaining Reimbursement from the Coast Guard for DC Emergency Operations Center Activities Relating to Gulf Oil Spill

thanks for the note. I have spoken with Tim Eastman several times, and have exchanged several e-mails with Jon Abramson and Greg Buie. I believe one of our OSCs in Robert has briefly mentioned this to RADM Landry, but I am not aware that she has seen our proposed PRFA. Via phone calls and e-mails, several potential concerns have been discussed, including:

- how closely can we tie our EPA HQ EOC work to being under the direction of the USCG FOSC?

- is there any duplication between Regional PRFAs and this proposed HQ PRFA?

- is EPA doing any work that cannot be specifically considered part of the response?

Although we have not been given a formal "NO", the skepticism expressed in some conversations and e-mails from your folks, and the very slow, or should I say lack of a, response to the proposed HQ EOC PRFA, indicates that there may be no support that this is a reasonable activity for the FOSC to support.

to support.
I have responded to some of the concerns expressed by Jon and others with a fairly detailed SOW, a detailed cost estimate including assumptions and methodology, and significant explanation of our HQ EOC activities and how we think they directly support the USCG FOSC. I realize there are a large number of very high priority activities (including at least one that took Greg away from Robert yesterday) that it might take a while to get something signed. However, we have 40-50 people in the HQ EOC every day, and many, many more in their home office supporting this response (and I didn't even include those "reachback" people in our cost proposal), and on an almost hourly basis I am asked if their is any progress on the reimbursable funding - I can tell you this is a growing priority for EPA.

I have copied many of your NPFC colleagues in the hope that they can shed light on this. The lack of a positive response to this point combined with some of the previously expressed skepticism are quite discouraging. Are there still legal concerns? scoping concerns? What should I tell our senior leadership is the primary reason we cannot get this PRFA approved by the FOSC?

Thanks again for your quick response and help.

Storm of the Capizzi, D PRIVILEGED ATTORNEY WORK PRODUCT INTER AGENCY COMMUNICATIONS

Need to follow up again on this question. The folks who operate the EPA Emergency Ops Center here in DC have indicated to our finance office that the USCG personnel they have spoken with believe that USCG cannot reimburse EPA for the additional costs the Agency has incurred (which are considerable) for ECC personnel and contract support above and beyond normal operations. Something about USCG could not recover the costs under the OPA may be a factor. Do you have any insights?

Jim, my sense is it is not a legal or policy issue and may just be communications. The Ops Center folks should contact our person at The UAC Jonathan.A.Abramson@uscg.mil, cell 202 494 9120. For more general funding process questions they can contact Timothy.G.Eastman@uscg.mil, cell 202 365 7610.

By the way your voice mail was left on my home number.

My office number is 202 493 6751.

regards

Jim I don't recall a voice message today but there were a couple that were silent so I may have missed you. Such costs have been a subject of discussion today and I have weighed in. Let me catch up with policy folks to see if there is a clearer picture. May be tomorrow morning.

DC Emergency Operations Center Activities Relating to Gulf Oil Spill

Derek:

This is a follow up to my voice mail earlier today on the above subject.

I understand from our emergency response program and finance office clients that the USCG's National Pollution Funds Center has advised EPA that it would be difficult for the USCG to reimburse EPA for activities relating to the Gulf oil spill that are not direct field work. For example, the technical, coordination and policy support our Headquarters Emergency Operations Center provides to EPA Regions 4 and 6 to assist them perform Pollution Removal Funding Agreements the CG has issued to EPA would not be reimbursable. I have been tasked with inquiring further into the rationale for USCG's position.

Could you please let me know if the USCG's advice to EPA indicating that only direct field work relating to the Gulf oil spill is reimbursable was based on legal concerns or reflects a policy decision. If the concerns are legal I will follow up with you so that I can explain the CG's position to our clients.

Thanks, and I can be reached at (202) 564-5456 if you would prefer to discuss over the phone. Will be in the office late tonight and I am tomorrow as well.
